METHODOLOGY, SAMPLE FRAME CONSTRUCTION AND DATA COLLECTION PROCEDURES

This poll is commissioned by Center for American Greatness and conducted by Susquehanna Polling and Research, Inc¹. Interviews were conducted September 25-28, 2020 with 500 registered/likely voters in Arizona. Survey respondents are randomly contacted using random selection procedures, and all telephone interviews are conducted using live telephone agents. Respondents had to first pass rigorous screening and pre-qualification procedures to ensure proper eligibility in the survey by affirming their intentions to vote in the November 3 general election. The sample frame was compiled using random telephone sequence methods, and includes both landline and cellular households, purchased from a certified list vendor; all households are pre-screened to eliminate household telephone numbers on the federal Do Not Call registry in compliance with all applicable federal and state laws. Only registered voters are contacted with prior vote history in one or better elections using 2018, 2016, 2014 and/or 2012 elections.

Interviews are closely monitored to ensure a representative sample of Arizona’s “projected” likely voters is achieved based on party registration and self-identification, geography, racial background, gender, age and other demographics; results are sometimes statistically weighted.

The margin of error for a sample size of 500 interviews is +/-4.3% at the 95% confidence level.
